

Offline Conversion Tool BETA Installation Guide

System Requirements

Run Windows Update and make sure you have the dot net framework version 1.1 upgrade installed.

The OCT is configured to run on Microsoft Windows 2000 and Windows XP. You must have **Microsoft Office 2000** or **Office XP** installed to use the OCT.

How to install the OCT

Once you have downloaded the OCT Install.exe file, double click the file to begin installation. Make sure you have all applications closed before beginning installation. Once this is done, the application will unzip the necessary set up files and install the OCT.

Please report all errors to the ePORT Bug Tracker along with what Operating System and version of Microsoft Office you are currently using.

How to uninstall the OCT

To uninstall the OCT, open your control panel and select Add/Remove Programs. Then select OCT from the list.

**This is a BETA release for testing purposes only.
